

Excel Exporting/ERP Systems

College Math Prep can export the student data for use in other systems or for classroom reporting and instructional revision. You can export the quiz scores in an Excel format and store this data to see if students are improving over a few semesters.

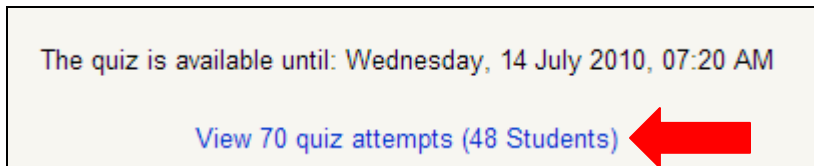

Here is how to get the data in Excel format.

Login to Math Prep,

Click the Quiz you want data from (pre-algebra, intermediate algebra, etc.)

Next click on the link that reads “View (#) quiz attempts (# Students)”

On the next page, Scroll down to the bottom and click the “Download in Excel Format” button or “Download in text format”

*****You can use this to compare semesters or for other reporting in ERP systems. You might have to modify the excel sheet a bit to make it fit, but you will see a column for ID, this is what you will use for your ERP systems to identify students.
