Graduates of the Computer Software Technology program are prepared to enter the workforce as information support staff, administrative assistants, or other office positions in private business and governmental organizations. Majors study the theory, design, development, and application of computer technology to computer information systems, and develop in-depth knowledge on the operation and structure of major business software packages. The degree allows the student to choose electives towards a student-selected specialization in information systems support, administrative assistant roles in general business, legal offices, or medical offices.

Work and Employment

The rapid spread of computers and computer-based technologies in recent years has generated need for skilled, highly trained workers. Computers have become essential to the operation of stores, banks, colleges and universities, governmental agencies, hospitals, factories, and many other profit and non-profit entities in our society. Employment for CIS graduates is expected to grow as organizations seek new applications for computers and improvements to the software already in use. Employers are increasingly interested in employees who can combine areas of technical expertise or who are adaptable, are able to learn and incorporate new skills, and are able to find opportunities for increased efficiency through the use of automation.

Special Consideration

Workers usually have the following skills and aptitudes: work independently, quickly and accurately, think logically and use good judgment, concentrate, possess mechanical and mathematical aptitudes, patience and persistence.
