

The Supervisory Management certificate program is designed with a core of specialized business courses that allow a student to become a front-line supervisor. After becoming familiar with business, human relations, supervision, management, and basic computers a student may desire to move on toward the completion of a certificate in management. The certificate is well designed for those individuals who are first-line supervisors with a need to upgrade their skills.

Work and Employment

Front-line supervisors are employed by all sectors of the economy including manufacturing and service industries. Supervisors are employed in large and small organizations with diverse responsibilities depending on the structure of the organization.
