SAUK VALLEY COMMUNITY COLLEGE'S ECONOMIC IMPACTS AND STUDENT EMPLOYMENT OUTCOMES

August 2021

Ву

The Center for Governmental Studies Northern Illinois University

The Sauk Valley Community College's Economic Impacts report was prepared by the Center for Governmental Studies at Northern Illinois University (NIU) under agreement with the Illinois Community College Board (ICCB). Questions and inquiries regarding the contents of this report may be directed to Brian Richard at NIU (815/753-0162) or Nathan Wilson at ICCB (217/558-2067).

The findings and conclusions presented in this report are those of the NIU project team alone and do not necessarily reflect the views, opinions, or policies of the officers and/or trustees of Northern Illinois University nor those of the employees, officers, and/or trustees of the Illinois Community College System.

ACKNOWLEDGEMENTS

The Northern Illinois University (NIU) project team consisted of Center for Governmental Studies staff Brian Richard, Assistant Director, Workforce Development, Andrew Blanke, Research Associate, and Nicolas Castillo, Graduate Research Assistant. Our invaluable Illinois Community College Board (ICCB) project team included Nathan Wilson, Deputy Director for Academic & Institutional Effectiveness, and Jay Brooks, Senior Director for Research and Policy Studies.

The project advisory committee provided deep insight and constructive feedback during all phases of the project. Members include:

Derrell Carter, AVP of Communications & Institutional Advancement, Triton College
Christian Collins, Vice Chancellor of Institutional Effectiveness, City Colleges of Chicago - District Office
Matthew Crull, Director of Research, Kishwaukee College
Dr. Jose da Silva, Vice President, Student Affairs, Kankakee Community College
Bryan Gleckler, VP Admin Services, Lincoln Land Community College
Dr. Vance Gray, Dean of Instruction, City Colleges of Chicago - Olive-Harvey College
Brittany Grimes, Director of Marketing & Public Relations, Carl Sandburg College
Travis Henson, Director, Institutional Research and Planning, Moraine Valley Community College
Dr. Judy Mitchell, President, Joliet Junior College
Dr. Ali O'Brien, Vice President of Community & Workforce Partnerships, College of Lake County
Dr. Sheila Quirk-Bailey, President, Illinois Central College

Dr. Karen Weiss, Vice President of Academic Affairs, Southeastern Illinois College

Sauk Valley Community College Operating Environment

The demographics and economic conditions in the regions where they operate impact community colleges offerings as well as the success of their program completers. Declining populations, especially in younger residents can affect enrollment. Economic conditions, especially job opportunities in specific industries, are directly related to the workforce outcomes of college completers.

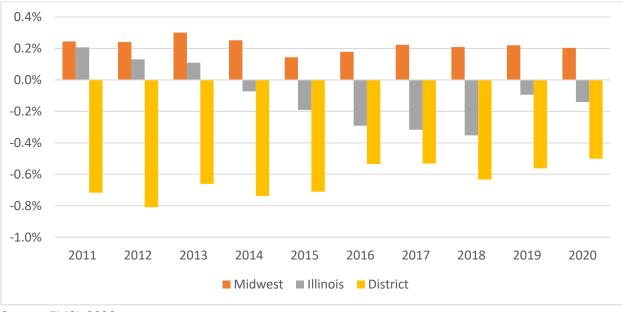

This report is meant as a supplement to a statewide report, *Illinois Community Colleges' Economic Impacts and Student Employment Outcomes.* The statewide report summarizes important demographic and economic conditions in Illinois, provides statewide Illinois community college student outcomes and estimates the economic impacts of the combined operations of the community colleges in Illinois.

Demographic and economic data are not available for the exact Sauk Valley Community College district boundaries. In the following charts and tables, the district is approximated by the region comprised of Bureau, Carroll, Lee, Ogle, and Whiteside Counties.

Population

The population loss experienced in Illinois since 2013 has been minimal but certainly noteworthy, as the rate of decline gradually increased through 2018, then began to reverse. Figure 1 shows the net change in population since 2011 for the Sauk Valley Community College district, Illinois, and the Midwest. A decline in the birthrate, increase in the death rate, and changes in the patterns of international and domestic migration all contribute to these changes. The net loss of population in Illinois appears to have moderated in recent years.

The district lost population each year in the decade. The rates of decline were mostly consistent from year to year.

Source: EMSI, 2020.

Race & Ethnicity Changes

The primary driver of population loss in Illinois has been the decrease in White and African American non-Latinx residents. Throughout this report, data reported for White and African American populations represent non-Latinx persons. The Latinx may contain multiple races. If it were not for the Asian, Other, and Latinx populations having higher birth rates or moving into Illinois, the population loss would be much greater. Figure 2 shows the change in the race and ethnicity categories for Illinois and the Sauk Valley district. Illinois has lost nearly 550,000 White and 68,000 African American residents since 2010. The Latinx population in Illinois grew by about 200,000. The Sauk Valley district's loss of White residents was somewhat offset by gains in all other races and ethnicities. However, the district lost population overall.

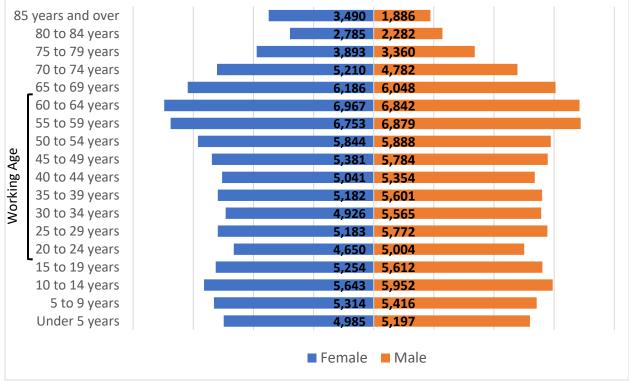

Figure 2. Race & Ethnicity Change in Population, 2010-2020

	Population Change	White	African American	Asian	Other	Latinx
Illinois	(221,803)	(544,675)	(67,721)	146,570	44,341	199,683
District	(11,785)	(15,335)	467	224	654	2,206

Source: EMSI, 2020.

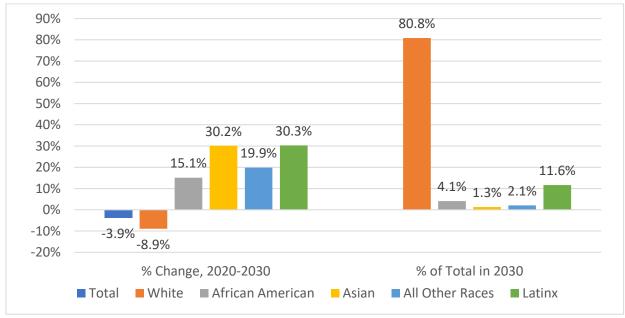

Figure 3 shows the age and gender distribution of the district's population. There are significant numbers of people at or approaching retirement age (55-64). The district has relatively fewer persons in the younger working age populations.

Figure 3. Age Pyramid for District, 2019

Source: EMSI, 2020.

The district population is projected to decline slightly in the next decade. As displayed in Figure 4, the White population is expected to decline. Offsetting those declines, all other racial groups are expected to grow. By 2030, the White population is expected to comprise about 80.8% of the total, Latinx 11.6% and African American 4.1%.

Source: EMSI, 2020.

Reflecting declines at the national and state level, the population of typical college aged students will be decrease in the coming years (Figure 5) in the Sauk Valley Community College district. The population ages 15 to 19 is projected to decrease 4.0% and the population ages 20 to 24 is projected to decrease 2.8%.

Meeting the Needs of Business and Industry

Illinois community colleges support local workforce and economic development services through employer and business engagement. During academic year 2020, Sauk Valley Community College interacted with 20 unique employers. Activities ranged from curriculum and apprenticeship development and review, contract training, internships, and professional development to job placement for graduating students.

Community colleges meet the demands of local business and industry needs and respond to the many changes in the workforce. Although the Great Recession officially ended in June 2009, the economic recovery in Illinois has been relatively weak when compared to the rest of the nation. While unemployment rates fell substantially in the years before the pandemic, labor force participation among key working aged populations continue to decline. This section looks at employment trends and the related demand for skills in Illinois. We examine employment conditions from the perspective of industry and occupation. *Industry* refers to the types of goods produced or services provided by the employer. *Occupation* refers to the work activities conducted by the employee. For example, registered nurse is an occupation in the health care industry.

Industry Employment Trends

Construction, manufacturing, and real estate were the fastest growing sectors in the district between 2010 and 2020 (Figure 6). Going forward, these growth patterns may be altered by the ongoing, perhaps permanent, impacts of the Coronavirus pandemic. See the discussion later in this document for more detail about these impacts.

	Employment		2010-2020) Change
Description	2010	2020	Number	Percent
Agriculture, Forestry, Fishing and Hunting	4,433	2,518	-1,915	-43.2%
Construction	3,058	2,975	-84	-2.7%

Currently Available Jobs

The demand for workers, as well as the required skills, credentials, and other attributes can now be assessed through web-based technologies that scan millions of job and applicant postings on popular sites such as Monster, SimplyHired, and Indeed or posted by various state and local employment bureaus.

Job Posting Analytics (JPA), developed by EMSI can help measure the demand for talent in a given region. It is more granular than traditional labor market information (LMI), providing details about the labor market (e.g. specific skills requested by employers) that LMI simply can't.

The top advertised occupations in the district cover a wide range of occupations, but show a strong demand for truck driving, nursing and other health care fields, and sales occupations (Figure 7).

Figure 7. Occupations by Number of Job Postings, 2020

Occupation	Unique Postings
Heavy and Tractor-Trailer Truck Drivers	15,779
Registered Nurses	1,431
Insurance Sales Agents	841
Light Truck Drivers	829
First-Line Supervisors of Retail Sales Workers	748
Retail Salespersons	677
Speech-Language Pathologists	610
Software Developers and Software Quality Assurance Analysts and Testers	474
Stockers and Order Fillers	462
Driver/Sales Workers	452

Source: EMSI, 2020.

The high number of postings for truck drivers is reflective of the nationwide demand for professional drivers, as well as Illinois' position as an important transportation and distribution center. Job posting data can be useful in identifying immediate workforce needs of local employers. However, the number of postings may be either higher or lower than the number of actual hires. Further, analysis of total job postings does not necessarily reflect long-term career opportunities, to the extent that it includes temporary positions. Postings might outnumber hires when a company is trying hard to find talent, or postings may be significantly fewer than hires because certain types of jobs (e.g., roofers, welders, and other blue-collar jobs) aren't typically advertised online. When this happens, EMSI de-duplicates the postings as much as possible and then provides a realistic ratio of unique postings to hires.

Current Demand for Workers

Figure 8 displays the industries that have the greatest job posting activity in the district. The largest number of postings came from companies in the transportation and warehousing sector. Other sectors with significant hiring activity include administrative, support, waste management and remediation services, retail trade, and health care and social assistance.

Figure 8. Top Industries Seeking Employees, 2020

Industry	Unique Postings
Transportation and Warehousing	15,328
Administrative and Support and Waste Management and Remediation Svcs	4,152
Retail Trade	3,718
Unclassified Industry	3,571
Health Care and Social Assistance	2,918
Professional, Scientific, and Technical Services	2,048
Manufacturing	1,462
Finance and Insurance	1,259
Accommodation and Food Services	696
Educational Services	587

Source: EMSI, 2020.

When analyzing the top skills requested by employers, duplication is very evident as most job ads list multiple skillsets. Figure 9 gives a sense of the kinds of skills that employers in the district are seeking in new employees, although it is difficult to assess how, and to what degree, employers evaluate these skills (e.g., it could be based on the applicant's on-the-job experience, credentials obtained, pre-employment testing, etc.). However, 'soft-skills' or 'people skills' (such as customer service, customer contact, sales and relationship building) are highly valued for a wide range of jobs. These skills are more value-oriented but educational programs could integrate instilling values, such as ethics and professionalism. Furthermore, some aspects of customer service or sales also involve increased use of technology (e.g., social media marketing). Community colleges can recruit additional students by offering more credentialed courses for these skills.

Figure 9. Top Skills by Number of Job Openings, 2020

Skill or Qualification	Frequency in postings
Flatbed Truck Operation	11.8%
Over-the-Road Driving	5.5%
Merchandising	4.5%
Nursing	3.6%
Dry Van Truck Operation	3.5%
Warehousing	3.1%
Cash Register	2.7%
Customer Satisfaction	2.6%
Restaurant Operation	2.2%
Cash Handling	2.1%

Source: EMSI, 2020.

The certifications listed in Figure 10 were found within the job postings and are ranked according to the number of postings in which they appeared. Commercial driver's licenses dominates this list. This is not surprising given truck driving's position at the top of the occupation demand list (Figure 7 above). Nurses and other related healthcare certifications appeared frequently as well.

Skill or Qualification	Frequency in postings
Commercial Driver's License (CDL)	31.9%
Transportation Worker Identification Credential (TWIC) Card	1.2%
Certified Nursing Assistant	1.0%
Hazmat Endorsement	0.9%
Licensed Practical Nurse	0.9%
Cert Of Clinical Competence In Speech-Language Pathology (CCC-SLP)	0.8%
Tanker Endorsement	0.6%
Nurse Practitioner	0.4%
CDL Class B License	0.4%
Bachelor of Science in Business	0.3%

Workforce Trends

Occupational Employment

Occupations in Illinois with expected annual openings that often require a career and technical education certificate and/or a professional license (typically defined as "some college no degree" by the US Census or "some college or postsecondary nondegree award" by US Department of Labor) are displayed in Figure 11. Example occupations include truck driving, emergency medical technicians, and hairstylists.

Truck drivers, nursing assistants, and automotive service technicians are expected to be in high demand in coming years. While some of the hires will be from industry growth, these occupations experience large numbers of employees leaving their jobs each year. These employees may leave because the occupation is a poor fit for their skills or desired lifestyle or as they advance into other careers. Skills training for these occupations should be paired with education about the working conditions and pay levels that workers can expect when they enter these jobs.

Figure 11. Job Growth in Occupations that Often Require a Certificate and/or License

SOC	Description	2020 Jobs	2030 Jobs	Growth Rate	Annual Openings
53-3032	Heavy Truck Drivers	1,299	1,291	-0.6%	136
31-1131	Nursing Assistants	1,270	1,204	-5.2%	128
49-3023	Automotive Service Technicians and Mechanics	514	520	1.1%	47
31-9092	Medical Assistants	219	258	17.9%	28
39-5012	Hairstylists, and Cosmetologists	236	223	-5.2%	26

Source: EMSI, 2020.

Figure 12 displays occupations with more than 5 expected annual openings in the district that typically require an associate degree for entry. Some occupations that are expected to grow slowly or even decline still are expected to have significant numbers of openings. These openings will be due to retirements and incumbent workers being promoted to higher level occupations or changing careers. Projected job openings for occupations typically requiring a bachelor's degree, including registered nursing, are shown later in Figure 20.

SOC	Description	2020 Jobs	2030 Jobs	Growth Rate	Annual Openings
25-2011	Preschool Teachers	226	226	-0.4%	22
29-1292	Dental Hygienists	89	114	28.1%	9
29-2034	Radiologic Technicians	122	132	8.4%	7
29-2051	Dietetic Technicians	99	93	-6.0%	7
23-2011	Paralegals and Legal Assistants	52	58	11.7%	6
19-4051	Nuclear Technicians	46	36	-21.3%	5
17-3022	Civil Engineering Technicians	58	52	-11.0%	5

Figure 12. Job Growth in Occupations that Typically Require an Associate Degree

Source: EMSI, 2020.

The Aging of the Workforce

As the Baby Boomers age into retirement, many occupations will face significant departures. Figure 13 displays occupations that typically require an associate degree for entry that have the highest percentages of workers over the age of 55. Many of these occupations are in the architecture and engineering (Standard Occupation Codes or SOCs beginning with 17-) and health practitioner (SOC 29-) fields.

Figure 13. Employment Distribution by Age: Occupations that Typically Require an Associate Degree*

SOC	Description	2020 Jobs	Age 25- 34	Age 35- 44	Age 45- 54	Age 55- 64	Age 65+
17-3023	Electrical Engineering Technicians	46	0	0	12	12	0
17-3022	Civil Engineering Technicians	58	10	12	14	14	0
29-1126	Respiratory Therapists	58	14	14	13	14	0
25-2011	Preschool Teachers	226	58	49	41	34	14
29-2034	Radiologic Technicians	122	32	29	25	25	0

Source: EMSI, 2020.

* Only top ranked occupations by the share of workers age 55 years and older are shown.

Equity

The Illinois Community College System and ICCB are committed to create, support, and expand workforce training opportunities in high-need communities focused on specific sectors with identified workforce gaps. The recently implemented Workforce Equity Initiative (WEI) in 2019 is evidence of Illinois community college efforts on improving education and employment opportunities in at-risk communities. The ICCB granted \$18.7 million dollars to community colleges throughout Illinois to help address education and unemployment gaps in the African American and other minority communities. The funding will be used across 17 community colleges throughout the state that serve larger African American populations under Illinois' Workforce Equity Initiative, now in its second year. Programs within WEI accelerate the time to enter and succeed in education/training programs. Illinois community colleges and ICCB are devoted to initiatives like WEI and others to promote gainful employment for underrepresented populations.

There are several state and federal initiatives that the Illinois Community College System and ICCB are committed to and collaborating on with state agency and business/workforce partners. One of Governor Pritzker's earliest actions was to issue Executive Order 2019-03 (EO3), focused on strengthening the state's commitment to workforce development and job creation. EO3 directed the Department of Commerce and Economic Opportunity (DCEO) to deliver a report containing three components: identifying target growth industries, review of effective and efficient investment in targeted industries, and report on improving alignment of workforce resources for disenfranchised communities. That final component stated the report should contain "comprehensive recommendations for improving the alignment of workforce resources for communities that have been disenfranchised, including rural and urban communities."

The report prepared in response by DCEO in cooperation with Departments of Employment Security and Human Services and the Illinois Community College Board includes three *Action Areas* (An Action Agenda, p. 3-4):

- <u>Action Area 1. Unite workforce development partners around regional cluster</u> <u>strategies</u>: Regional cluster strategies will focus resources on the industries with the highest potential to add jobs and increase prosperity in regions across Illinois. These strategies bring together the public and private sectors in each region to build on their unique strengths.
- <u>Action Area 2. Prepare Illinois workers for a career, not just their next job</u>: Regardless of background, life circumstances, or education level, Illinois workers can be prepared for high-demand careers by developing core academic, technical, and essential employability skills throughout their lifetimes.
- <u>Action Area 3. Connect job seekers with employers</u>: Illinois businesses can find the productive workers they need through more efficient training and better services for job seekers and employers.

Action Area 2 included a strategy focused on equity: *Establish and support equity goals*. "Preparing workers to meet the needs of business while connecting them to viable career pathways in Illinois' most vibrant industries will lead to economic prosperity at all levels. An important focus of these efforts must be ensuring that disenfranchised populations have access to these employment opportunities" (An Action Agenda, p. 15). This strategy had several Action Steps, including (An Action Agenda, p. 16):

- Disaggregate data by race, gender, and target population to reveal where disparities and inequities exist in policies and programs.
- Compel advisory and oversight boards/councils to set equity goals and prepare action plans to achieve them.

Subsequent to the release of the EO3 report, a number of economic, education and workforce development plans have been developed and released. These plans have increasingly placed an importance on equity issues. The Illinois economic development plan includes an Aspirational Goal focused on equity (A Plan to Revitalize, p. 3):

Reduce the Equity Gap by investing in, providing support to, and taking down barriers for economically disadvantaged populations. We will track our progress toward this goal by tracking Median Earnings relative to the statewide average for the following populations:

- Women
- Rural residents
- People of color
- People with disabilities
- Veterans
- Justice-impacted populations
- Immigrant populations

The Illinois Perkins V plan includes a *Foundational Tenet* focused on increasing educational equity for members of special populations (Illinois' Perkins V State Plan, p. 5):

Illinois aims to place equity at the forefront of decisions made regarding career and technical education (CTE) programming, acknowledging that opportunity and achievement gaps exist for members of special populations. Perkins V affords Illinois the opportunity for an increased focus on meeting the needs of members of special populations by improving systems to identify and understand equity gaps, aligning resource systems, and providing professional learning to support the implementation of CTE programs that are accessible and effective for all students.

Similarly, the Illinois Workforce Innovation Board guided the development of the Illinois Workforce Innovation and Opportunity Act (WIOA) Unified State Plan, which includes a set of principles as part of its vision statement. One focuses on equity:

<u>Equitable Access and Opportunity for All Populations</u> - Connecting individuals with relevant supports, such as transportation, child care and transition services will enable the system to be responsive to the workforce readiness needs of all individuals and help targeted populations prepare for and advance along a career pathway.

While these plans place an importance on equity issues, only the economic development plan provides guidance on how equity should be quantified and tracked. There are other resources that suggest metrics for tracking progress on equity. The Center for Urban Education states that "Effective state attainment goals are based on an understanding of for whom and by how much higher education access and success must improve" (Making Equity Part, p. 4). This understanding answers these questions:

- Which populations have the lowest rates of postsecondary attainment historically?
- Which populations are the fastest-growing in the state?

- What career fields and occupations in the state have strong labor market demand currently? In five, 10, 15 years? What are the levels of educational attainment required for those jobs? What are the projected shortfalls of adults with those credentials?
- At current rates of educational attainment, will some populations in the state be disproportionately excluded from opportunities in high-wage, high-demand jobs?

Similarly, a report from Education Trust cites degree attainment as an important regional measure of equity. Based on an analysis of social mobility (the ability of people to achieve higher incomes than their parents), the authors conclude that education is a way out of poverty. Thus, they suggest three ways of looking at educational attainment (Del Pilar & Berger, p. 16):

- Overall degree attainment
- Growth in degree attainment
- Gaps in degree attainment

The Office of Community College Research and Leadership at University of Illinois at Urbana-Champaign also suggests metrics for ensuring programs align with labor market needs and demands, with a particular focus on equity (Welton & James-Gallaway, p. 9-11). These includes using data to identify inequitable employment outcomes.

Regional Equity Indicators

Income and Poverty

Racial and ethnic income disparities are significant and persistent in Illinois and in the district. White workers earn significantly more than African American and Latinx workers. Consequently, African American, and Latinx households are more likely to be in poverty.

In 2010, the median income for African American households in the district was less than half that of White households in Whiteside County (Figure 14). Less drastic, but still significant, income gaps between White and African American households were also in the counties of Bureau, Ogle, and Lee Counties. The disparities increased by 2019. Median income for African American households fell in some counties while non-Latinx White incomes rose.

Latinx households tend to have higher incomes than African American households, but still earn significantly less that White households. Latinx household incomes grew in three of five counties in the district, but they decreased in Lee County and Ogle County. Care must be taken when comparing incomes for Latinx households, since Latinx ethnicity can include any race.

	Bureau County		Carroll C	ounty	Ogle County		
	2010	2019	2010	2019	2010	2019	
All Households	\$45,692	\$57,436	\$44,805	\$52,410	\$55,733	\$60,986	
Non-Latinx White	\$46 <i>,</i> 338	\$57 <i>,</i> 844	\$44,588	\$53 <i>,</i> 018	\$56 <i>,</i> 437	\$62,186	
African American	\$37,063				\$44,896	\$42,619	
Asian	\$25,568	\$37,440	\$57,679		\$49,338	\$55,125	
Latinx	\$36,607	\$54,091	\$37,150	\$43,646	\$50,677	\$48,512	

Figure 14. Median Household Income by Race, 2010 and 2019

	Lee Co	ounty	Whiteside County		
	2010	2019	2010	2019	
All Households	\$48,502	\$58,194	\$45,266	\$54,232	
Non-Latinx White	\$49,851	\$58,704	\$47,171	\$55,054	
African American	\$35,259	-	\$23,750	\$35,551	
Asian	\$63,750	-	\$16,477	\$61,328	
Latinx	\$45,847	\$45,694	\$38,140	\$50,560	

Source: American Community Survey, 5 year estimates

The percentage of persons with income below the poverty level in the district rose from 10.3% to 11.0%. between 2010 and 2019 (Figure 15). Asian persons are significantly less likely to be low income by this measure. The percentage of persons below the poverty level for all races and ethnicities besides Asian increased. African American persons are more than twice as likely as White persons to be in poverty.

Figure 15. Percentage of Persons with Income Below the Poverty Level by Race, 2010 and 2019

	2010	2019
All Households	10.3%	11.0%
Non-Latinx White	9.2%	10.4%
African American	18.6%	23.8%
Asian	10.4%	3.8%
Latinx	22.0%	14.3%

Source: American Community Survey, 5 year estimates

Based on the review of state education and workforce development plans and higher education equity research, two main indicators of workforce equity were chosen to give broad insight into the racial and ethnic income disparities. As Del Pilar & Berger (2019) assert, education is a way out of poverty. Thus, educational attainment is an important indicator. Welton & James-Gallaway, (2019) suggest using data to identify inequitable employment outcomes. Occupational employment and wage rates by race are the best available measure of employment outcomes.

Educational Attainment

While White residents of the district were slightly more likely than African American residents to complete high school and get a bachelor's degree (Figure 16). Asian persons were significantly more likely to continue their educations past high school. About one-third of White persons had at least some college or an associate degree. An additional 17% had a bachelor's degree or higher. Less than 12% failed to finish high school.

The percentage of African American persons that earned a high school diploma but did not continue their education was about 40%, which was mostly consistent with White persons. A slightly higher percentage of African American persons (35%) than Whites had some college or and associate degree. However, African American persons were less likely to earn a bachelor's degree or higher than Whites. Over 15% of African American persons had not earned a high school diploma or equivalent.

Latinx persons had significantly lower attainment rates than the other groups. Nearly 39% had not completed high school in 2010. They were also much less likely to continue their education beyond high school.

	Total	White	African American	Asian	Latinx
Total	136,445	125,455	1,765	714	7,439
Less than high school diploma	13.2%	11.6%	16.2%	11.6%	38.8%
HS graduate (incl equivalency)	38.8%	39.2%	39.8%	38.2%	31.9%
Some college or associate deg	31.7%	32.3%	34.8%	12.2%	21.9%
Bachelor's degree or higher	16.3%	16.9%	9.2%	38.0%	7.4%

Figure 16. 2010 Educational Attainment by Race and Ethnicity for Population Age 25 and Over

Source: American Community Survey, 5 year estimates

While most racial and ethnic groups had improved their attainment rates by 2019, the rates of African American residents in the district fell (Figure 17). For all persons over 25 years old, the percentage at least completing high school improved by over 3 percentage points and the percentage of those obtaining a bachelor's degree or higher improve by about 3 percentage points. About 55% of the population ages 25 and over had had furthered their education beyond high school, compared with about 48% in 2010.

African American persons lagged farther behind Whites and Asians in 2019. About 70% of African American persons had at least completed high school, compared with 92% of White persons. Of those that completed high school, non-Latinx Whites were more likely to further their education, including more likely to complete a bachelor's degree or higher.

Occupational Employment

There were nearly 70,000 jobs in the district in 2020¹. Overall, about 49% of jobs were held by women, 21% held by non-White persons, and 11% held by Latinx persons. Figure 18 displays data for occupations employing at least 200 in the district that have a typical entry education level of 'Some College or Postsecondary Nondegree Award' according to the U.S. Department of Labor. Example occupations include truck driving, emergency medical technicians, and hairstylists.

¹ The data in Figures 18-20 display numbers of jobs. A single person can hold more than one job. According to the US Bureau of Labor Statistics, the total number of persons employed In Illinois in 2019 was just under 6.2 million.

Occupations in this category tend to have very low gender diversity. Truck driving and firefighting employ more than 90% males. Conversely, nearly other occupations in this category employ employ at least 90% females. Four out of five occupations that pay less than \$16 are female dominated. Two occupations had earnings greater than \$20 hourly- trucking is male dominated and nursing is female dominated.

Jobs in those occupations held by higher percentages of non-White persons also tended to be lower paying. All three occupations employing more than 25% non-White persons (21% is the average for all occupations in the district) had median earnings of less than \$16/hour.

Latinx persons are underrepresented in most of the occupations in this category. Despite making up about 11% of the workforce, Latinx persons only exceeded 10% of the workforce in three occupations: teaching assistants, automotive technicians, and medical assistants. Two of these occupations had earnings below \$16 per hour.

SOC	Description	2020 Jobs	Avg. Annual Openings	Pct Female	Pct Non- White	Pct Latinx	Median Hourly Earnings

Figure 18. Employment for Occupations Often Require a Certificate and/or License

Source: EMSI, 2020.

Figure 19 displays employment in the district for occupations that typically require an associate degree. Statewide, diversity is generally more balanced for these occupations relative to the lower skilled occupations in Figure 18. However, significant challenges remain in some occupations to increase diversity.

Gender data are not available for some of the occupations at the county level. Where data are available, most of the occupations are dominated by females. The two occupations with hourly earnings below \$20 employed more than 80% females. Of the seven occupations with earnings greater than \$25 per

hour, two were male dominated and two had insufficient local data, but were predominately male statewide.

Data are not available for these occupations at the local level to make significant conclusions about the racial and ethnic compositions.

Figure 19. Occupational Employment, Associate Degree Typical Entry Level Education

Source: EMSI, 2020.

Information about occupations employing more than 250 in the district that typically require a bachelor's degree for entry are displayed in Figure 20. It should be noted that while U.S. Department of Labor identifies a bachelor's degree as the 'typical' entry level education required, there are pathways to occupations on this list that do not require a bachelor's degree. For example, it is possible to become a registered nurse without earning a bachelor's degree.

At the bachelor's degree level, higher-paying jobs had somewhat more gender diversity. The two highest-paying occupations in this category were general managers and financial managers. General managers are 2/3rds male and typically earn \$35.74 hourly. Financial managers are 60% female and earn \$41.71/hour. However, substitute teaching was the lowest-paying bachelor's degree occupation, and it is 3/4ths female.

Only one occupation in this category have higher percentages of non-White persons than the average of all occupations (22%). This occupation was registered nursing, which pays \$29.41 hourly and employs non-White persons for 28% of positions.

Again reflecting their lower than average educational attainment, Latinx persons are underrepresented in all but one occupation in this category. The exception is Substitute Teaching, which has by far the lowest median earnings in this category.

SOC	Description	2020 Jobs	Avg. Annual Openings	Pct Female	Pct Non- White	Pct Latinx	Median Hourly Earnings

Coronavirus Pandemic

In early 2020 the Coronavirus pandemic disrupted the social and economic structures of communities worldwide. Government regulations such as stay-at-home orders and restrictions on business operations changed the way many businesses could operate. In addition, individuals changed their spending habits to avoid contracting the virus. The impact on employment was rapid and severe, with many businesses laying off employees or completely closing their doors. While significant recovery occurred by early 2021, employment levels remained below 2019 averages.

In late 2019 Illinois unemployment rates had fallen below 4%, hitting a low of just 3.4% in February 2020. Between February and April 2020, about 1.1 million out of about 6.2 million Illinois workers lost their jobs. The unemployment rate soared to 17.2%.

About 600,000 workers had regained their jobs by January 2021, bringing the unemployment rate below 8%. By comparison, during the 'Great Recession' of 2008-2009 the Illinois unemployment rate peaked at 11.3%. During the Coronavirus pandemic, the U.S. unemployment rate peaked at 14.7% in April and fell to 8% by October 2020.

In the district, the monthly unemployment rate peaked at just over 15% April 2020 (Figure 21). The rate declined steadily, falling to 5% in late 2020. After increasing to 7% in January it declined to about 6% in March 2021. Unemployment trends in the district were largely consistent with the state.

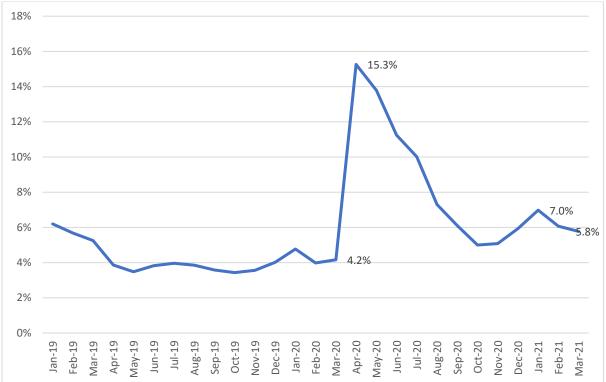

Figure 21. District Unemployment Rate Trend

Source: Illinois Department of Employment Security, Economic Information and Analysis

The pandemic had uneven impacts. The U.S. Bureau of Labor Statistics publishes national unemployment rates by various demographic groups. Figure 22 displays national quarterly unemployment rates (this level of detail is not available at the county level). The rate for all persons 16 and over rose from 3.5% in 2019 to 12.9% in 2020. The rate for youth 16-19 rose from an already significant 13.4% to 28.7% and for those 20-24 years it rose from 6.5% to 22.7%. Those in older age brackets fared better but still experienced rates above 11%. Women were impacted to a greater degree than men, with an unemployment rate reaching 14% vs. just under 12% for men.

Unemployment rates for White workers were slightly lower than the overall averages for all age groups and genders. African Americans, already experiencing higher unemployment rates than other races experienced an unemployment rate of over 16% during the height of the pandemic. Their unemployment rates were higher than the overall averages for all age groups. African American male unemployment rates rose higher than females, which was not the case for other races/ethnicities.

Asians had lower unemployment rates prior to the pandemic than the overall averages. However, their rates increased to above the rates for White workers for all age groups and genders. Asians aged 20-24 were especially hard hit, rising from 4% to nearly 30% unemployment rates.

Latinx workers had unemployment rates similar to the overall averages in 2019. The pandemic caused their rates to rise more significantly than White workers. Latinx youth aged 16-19 years had the highest rate of any group examined, with 1 out of 3 being unemployed.

Figure 22. National Quarterly Unemployment Rates by Gender, Race, and Ethnicity

Source: U.S. Bureau of Labor Statistics, Labor Force Statistics from the Current Population Survey, 2020.

National research by the Pew Research Center found that the true impacts on employment were more significant than the government unemployment statistics suggest. Their analysis estimated that the true national unemployment rate in May 2020 was 16%, higher than the 'official' rate calculated from U.S. Census Bureau's Current Population Survey (CPS) of 13% (Kochhar, 2020). The discrepancy was largely due to the fact that millions of workers were listed as 'employed but absent from work' in the unemployment survey. These workers were not counted as unemployed. They found that the rate for women was nearly 18% (higher than the 14.3% CPS estimate) and about 20% for African Americans, Asians, and Latinx persons (16.6%, 14.9%, and 17.2% CPS estimates respectively).

Data from Illinois indicate that the impacts on various demographic groups have been mostly similar to the rest of the nation. Figure 23 displays averages of initial unemployment claims in the district for 2019 (pre-pandemic), the 2nd quarter of 2020 (pandemic impact peak) and the first quarter of 2021 (most recent available). Claims increase by 35% at the height of the pandemic impacts. By early 2021, claims had drastically fallen below 2019 levels.

As indicated by the national unemployment statistics, youth were impacted to a greater degree. Claims by workers aged 16-24 increased by 179% from less than 800 in 2019 to over 2,000 at the height of the impacts in Q2 2020. Workers aged 45-64 had the smallest initial increase, about 10% from 2019 to Q2 2020.

White workers experienced the largest initial increase in claims compared to the overall total. African American, Asian, and Latinx workers experienced smaller increases.

The increases in claims in the district appears to be driven almost entirely by female workers. The level of claims for male workers actually fell 13.6% from 2019 to Q2 2020, while the number of female claimants grew 167%. The national data also indicate that women were more severely impacted by the pandemic.

Source: Illinois Department of Employment Security, Characteristics of Unemployment Insurance Claimants by State and County, 2021 (data are averages of monthly levels).

Due to their high levels of person-to-person interaction, employment in service industries were impacted the greatest by the pandemic. Education and health services, leisure and hospitality, and other services all had greater than 100% increases in unemployment claims (Figure 24). Moving in to early 2021, claims in most sectors had fallen below 2019 levels. Major exceptions included agriculture and construction, but the increase in both sectors was likely due to seasonal variations.

Figure 24. District Initial Unemployment Claims by Industry Sector

Source: Illinois Department of Employment Security, Characteristics of Unemployment Insurance Claimants by State and County, 2021 (data are averages of monthly levels).

As would be expected, service occupations were the most impacted by the pandemic (Figure 25). Health care practitioner occupations had the highest increase in unemployment claims in the 2nd Quarter 2020, followed by personal care, food preparation, and legal occupations. Perhaps surprisingly, production occupations had highest numbers of claims, although the increase in claims in these occupations was modest in comparison with others.

Job losses in some of these sectors may be permanent. Using data from the Federal Reserve Bank of Atlanta/Chicago Booth/Stanford Survey of Business Uncertainty (SBU), Barrero, Bloom, and Davis (2020) estimate that 42% of the jobs lost in the U.S. will be permanently eliminated. "But even as many firms were shedding workers, some were hiring. The April SBU showed that the COVID-19 shock caused three new hires in the near term for every 10 layoffs. A restaurant server, for instance, might take a job with a delivery service or a clothing store clerk might go to work in an online retailer's distribution center."

As long-term changes to the economy become more apparent, community colleges and other parts of the workforce development system can help retrain those that have permanently lost their jobs.

Sauk Valley Community College Student Outcomes

Illinois community colleges are multipurpose institutions with the capacity to offer short- and long-term certificate programs for high demand jobs, associate's degrees for career preparation or transfer to bachelor's degree programs, college preparatory courses, and noncredit continuing education. Community colleges are diverse throughout Illinois and exist to meet the needs of the communities they serve.

Community college programs prepare individuals for high-skill, in-demand employment that furthers Illinois' global competitiveness. Education programs offer flexible scheduling, work-based learning, and stackable credentials that provide a pathway from education to employment not only for recent high school graduates, but also for returning adults, veterans, and incumbent workers. Success in education programs like Career and Technical Education areas of study are amplified by academic support services, work-based learning opportunities, and business engagement. CTE's reach in Illinois' workforce continues to be expansive; in academic year 2020, there are over 4,300 different CTE program offerings across the community college system.

Most students attend college to improve skills that will be valuable to employers. The following section details workforce outcomes of community college completers. It begins by calculating the return on investment of a typical Illinois community college completers. It then details program completion rates by various academic programs and student groups. Finally average annual earnings for various demographic groups and program types are presented.

Student Return on Investment

Obtaining a credential at a community college is an investment. The time and money invested in education results in higher earnings after completion. Students attending college pay for their education in both cash and in foregone earnings. The net cash price is the cost of tuition, fees, books, and room and board. Foregone earnings result when a student spends time going to school and studying in place of earning money at work.

The analysis in this section focuses on the return on investment of students aged 20 to 29 that completed a two year program that was not focused on transfer to a 4-year institution (AAS or long-term certificate) in FY2018. The cost of attending school during the FY2017 and FY2018 school years is compared with projected earnings over a 40 year post graduation time frame. The results are net present value (NPV) and internal rate of return (IRR) estimates for the average completer in FY2018. Within the community college system, a considerable portion of the student population is non-traditional (older population) and may be working in a career job already as they are upskilling. However, for this particular model the focus is more on the traditional matriculation of high school to college and full-time status within the community college system. There are many different paths to completing a community college credential. This analysis focuses on a student that completes their program within two years in their early 20s, and does not work during their time in school. After completion, the calculations assume a 40 year working career.

There are many different paths to completing a community college credential. This analysis focuses on a student that completes their program within two years in their early 20s, and does not work during their time in school. After completion, the calculations assume a 40 year working career.

If a student works while in school this may reduce their initial investment (by reducing opportunity costs), thereby increasing the ROI and NPV. If a student takes longer than 2 years to complete their degree this may increase their initial investment, thereby reducing the ROI and NPV.

The net cash price of attending school was obtained from the National Center for Education Statistics' College Navigator tool. College Navigator employs Integrated Postsecondary Education Data System (IPEDS) data from the National Center for Education Statistics to calculate the *average net price*² for annual attendance at each school. The statewide figure is the average (weighted by student enrollment counts) of individual Illinois community colleges.

The other major cost for college attendees is their foregone earnings, often referred to as the 'opportunity cost' of attending college. The estimate for foregone earnings is based on average high school graduate earnings levels. In Illinois, Median Earnings for a 20-year old high school graduate is \$9,751³, increasing to \$10,919 for a 21 year old. These values are used as the estimates for the opportunity costs of attending a community college in the ROI calculations.

² "Average net price is generated by subtracting the average amount of federal, state/local government, or institutional grant or scholarship aid from the total cost of attendance. Total cost of attendance is the sum of published tuition and required fees (lower of in-district or in-state), books and supplies, and the weighted average for room and board and other expenses." (Source: National Center for College Statistics, COLLEGENavigator. https://nces.ed.gov/Collegenavigator/)

³ Source: U.S. Census Bureau, 2014-2018 American Community Survey.

The major benefit of completing college is the resulting increased earnings. Earnings data for ICCS completers in a 2014 study showed that earnings gains for statewide completers totaled about 31% of post-completion earnings. This is very similar to the earnings difference between associates degree holders and high school graduates for persons in their early 20s. Thus, first year earnings gains are estimated as 31% of post-completion earnings of \$38,115, or \$11,816. Other studies⁴, as well as Census data on earnings by age, indicate that earnings gains from educational attainment grow significantly in the first decade of a worker's career, and subsequently flatten. Based on these data, earnings gains from credential attainment are assumed to grow by 7% per year in the 10 years following completion then remain stable.

Figure 28 presents the net return analysis based on the calculations noted above. The total cost during the two years the student is in school, including out of pocket expenses and foregone earnings is \$35,473. The return on investment occurs over a 40 year working life, where increased earnings for a degree completer are estimated to total about \$730,000 (compared to someone not attending community college).

Year	Net Price	Opportunity Cost	Total Cost	Post Completion Earnings Gains	Discounted Cash Flow
-1	\$7,334	\$9,751	\$17,085		-\$17,768
0	\$7 <i>,</i> 469	\$10,919	\$18,388		-\$18,388

Figure 28. Estimate Net Return for AAS Degree and Long-Term Certificate Completers

⁴ See for example <u>*Ranking ROI Of 4,500 US Community Colleges And Universities*</u> from the Georgetown Center on Education and the Workforce.

The net present value of investing in a Sauk Valley Community College associate degree or long-term certificate is nearly \$295,000. The internal rate of return on their investment is 29.1%. In other words, if a student put \$35,473in an investment that returned 40 annual payments equivalent to the earnings gains from an associate degree/long-term certificate, they would earn interest at a rate of 29.1%.

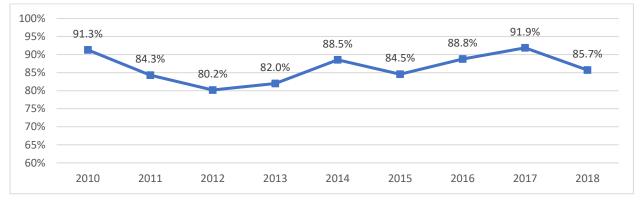

Student Employment Outcomes

Information on student outcomes derives from the Institutional Researcher (IR) Tool dataset, which connects individual-level data from ICCB and Illinois Department of Employment Security ((DES) administrative data systems to generate student outcomes on employment and wages. The IR dataset includes information on ICCS completers who completed a credential in 2009 through spring 2018, including their earnings and employment status before and after completion.

In this study, a mix of panel data and snapshot data provide information about student outcomes from multiple angles. Panel data shows outcomes for the same group of completers over time. For example, we use panel data to show the trajectory or earnings for students who completed in 2009. Snapshot data shows the characteristics of students that completed each year, such as the employment rate for the class of 2009, the employment rate for the class of 2010 and so on. Next, student outcomes are examined in terms of employment rates, postsecondary enrollment, and earnings. All information is presented on a fiscal year basis, with the year corresponding to the calendar year of the spring semester, e.g., FY2018 begins with the summer 2017 term and ends with the spring 2018 term.

Employment

According to ICCB data, in recent years more than 80% of completers of long-term certificate programs or Associate in Applied Science programs at Sauk Valley Community College are employed in career jobs within a year of graduation. This trend was consistent for completers each fiscal year through FY2018, which includes those who completed programs in the spring of 2018. Completers of short-term and transfer programs are excluded from the one-year employment rates because they typically pursue further education in the year after completion. The career job employment rate for Sauk Valley Community College completers improved between FY2015 and FY2018.

Career job employment rates typically improve for Sauk Valley Community College completers over time. Among those who completed programs in 2009, 78.0% were employed one year after graduating,

and 85.9% were employed in career jobs after 10 years. Starting two years after completion, AAS and long term completers had the highest employment rate.

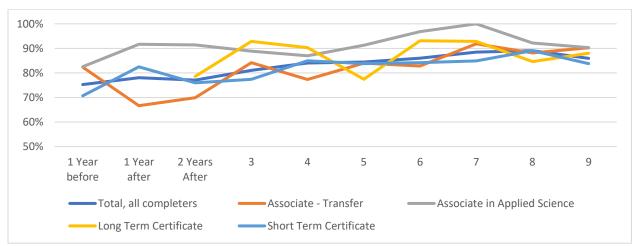

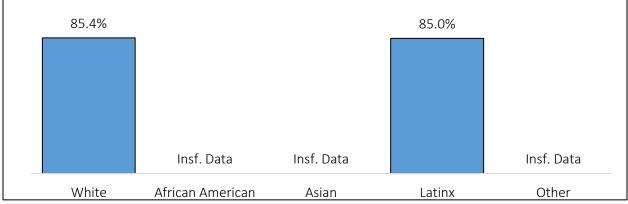

Figure 30. Career Job Employment Rate for 2009 Completers*

*Career job employment rate is excluded for short-term certificate completers, and long term certificate completers 1 year after, due to insufficient data.

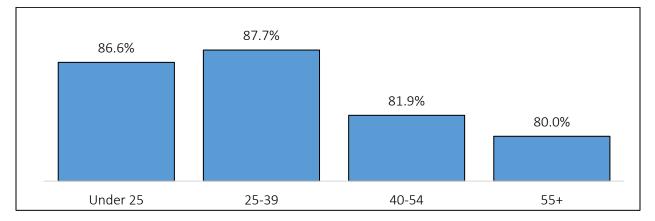

Employment rates varied by race and ethnicity for those who completed Sauk Valley Community College programs in FY2018 (latest full year available). Latinx completers (any race) represented the largest minority group by share of completers and they had a career job employment rate of 85.0%. All other minority groups had less than 10 long-term completers in FY2018 and are difficult to draw conclusions for with regard to employment rate. The majority of completers were White, so their employment rate was consistent with the average. Care must be taken when comparing employment rates because they can be skewed by the employment status of students before they graduate. The IR dataset shows employment status up to one year before graduation, but employment rates before *enrollment* would show a stronger indication of growing employment opportunities.

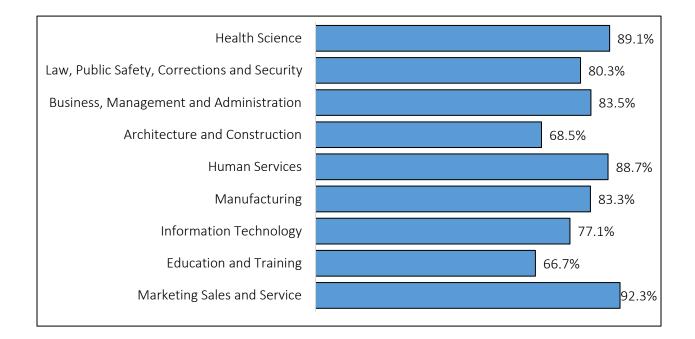

Employment rates were highest for younger completers and declined for completers age 40 or higher. About 86.6% of completers of long-term certificate programs or AAS programs in the traditional college age, under age 25, were employed in career jobs six months after graduating. About 87.7% of completers in the 25-39 age range were employed in career jobs. About 81.9% of completers in the 40-54 age group were employed. In some cases, the employment rate is lower because completers defer working full-time to pursue a university degree. Employment rates were lowest for the oldest (55+) completers.

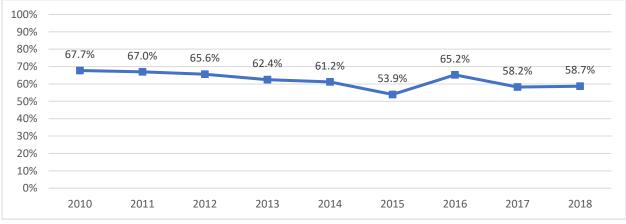

Employment rates also varied considerably by the career clusters that completers studied for. The highest career job employment rates were for those who studied for marketing, health, or human services. The lowest career job employment rates were for completers of programs in education or architecture.

Figure 33. Career Job Employment Rate One Year After Completion by Career Cluster (Long-Term Certificates and Associate in Applied Science Completers)

Postsecondary Enrollment

A fairly substantial number of Sauk Valley Community College completers continue their education in the same institution or another 2- or 4-year educational institution within a year after graduating. Students sometimes complete CTE programs as part of a sequence of credentials that can be accumulated or are "stackable" over time to build up an individual's qualifications and help them to move along a career pathway or up a career ladder to different and potentially higher-paying jobs. Students in associate degree transfer programs, of course, also continue education in their path to a Bachelor's degree. The postsecondary enrollment rate, the percentage of completers who enroll in a four-year degree program within a year of completion, for Sauk Valley Community College completers varied slightly from year to year, although the general trend shows a slight decline. These figures do not include completers who pursue further education after their first year out of community college. They also exclude completers who pursue shorter-term training or education, such as additional credentials in the ICCB system. Postsecondary enrollment rates have decreased from 67.7% for FY2010 to 58.7% in spring 2018.

*Spring only for 2018.

Earnings

Looking at a longer time horizon, the class of 2009 earned \$46,008 nine years after graduating, representing an average annual growth rate of 20.9%. The earnings growth is most significant in the first few years after graduation. Some of the earnings growth in the first year include transitioning from part-time to full-time employment.

Figure 35. Median Earnings Over Time for 2009 Completers (Long-Term Certificates and Associate in Applied Science Completers)

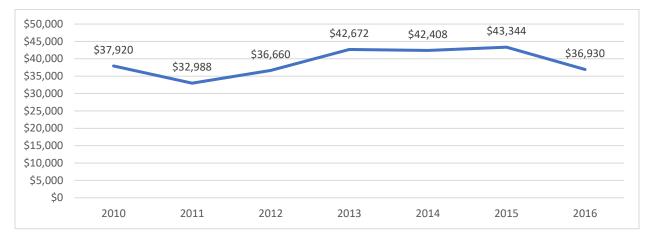

Completers of associate degrees for transfer to other institutions earned a median of \$34,236 five years after completing their program at Sauk Valley Community College. Ten years after completion, the median earnings were \$41,748 which represented a 4.4% increase each year. Earnings for the first five years are excluded because these completers are still finishing their four-year degrees at this time. Statewide, earnings for associate transfer completers are typically lower than for AAS and long-term certificate completers.

Figure 36. Median Earnings Over Time for 2009 Completers (Associate - Transfer Completers)

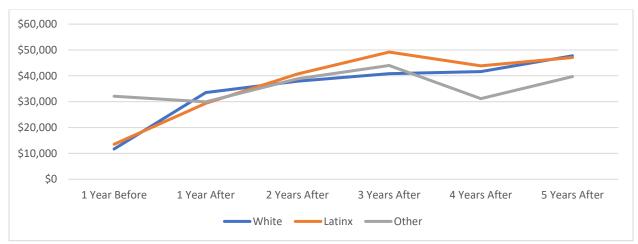

The earnings of Sauk Valley Community College completers varied slightly by year of completion. Those who completed their program in FY2010 earned a median of \$37,920 after three years. For FY 2016, completers earned a median of \$36,930 after three years. Median earnings were somewhat lower for completers in FY2011, but they increased for FY2012 onward.

Figure 37. Median Annual Earnings 3 Years After Graduation, by Year of Graduation (Long-Term Certificates and Associate in Applied Science Completers)

Information on earnings trajectories by race for Sauk Valley Community College completers is limited due to few completers in several minority groups. However, earnings for Latinx completers were consistent with those of White completers, and in some years they were higher. The "Other" race/ethnicity category is difficult to generalize because it includes those with multiple races and nonresident exchange students. It is not possible to dissect earnings further within the "other" category due to limited data over time for completers in each sub-category.

Earnings varied considerably by age. The highest earnings were for completers under age 25 and were lower for older age group. Completers in the 25-39 age group typically earned more than completers under age 25. Earnings are affected by work experience and hours worked.

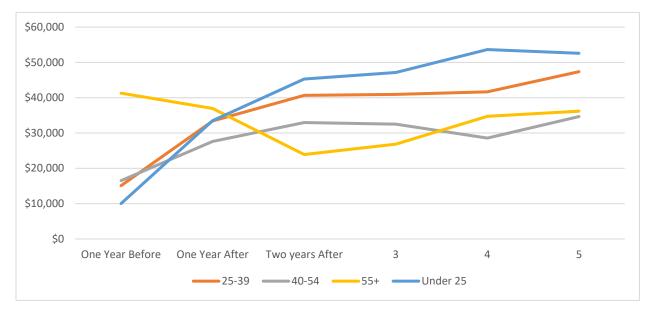

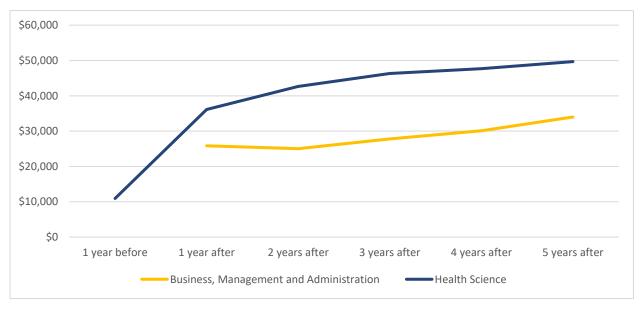

Figure 39. Median Earnings Over Time for 2013 Completers by Age (Long-Term Certificates and Associate in Applied Science Completers)

Earnings for Sauk Valley completers depend on the types of jobs held after completion. Continuous earnings data for Sauk Valley Community College completers in specific career clusters is limited, but the highest earnings after five years was for those with degrees in business administration.

Short-Term Certificate Student Employment Outcomes

Illinois community colleges are committed to continuing growth in short-term certificate opportunities particularly in high-need communities focused on areas specific sectors with identified workforce gaps.

The Workforce Equity Initiative (WEI) in particular, is evidence of Illinois community college efforts on short-term certificate expansion in high demand-careers. In addition, WEI also targets low-income individuals, those living in high crime and high poverty areas, and unemployed individuals and minorities. Illinois community colleges are leaders in workforce development and WEI, with its evidence-based model, even further economically impacts students, particularly underrepresented groups. The figure below illustrates WEI's model of developing short-term certificate programs in high-demand occupations that provide a salary 30% above a living wage within that region.

The Illinois community college system's commitment to strengthening job creation and workforce development is evident in the alignment of the short-term certificate graduate instructional areas (Figure 41) and many of the occupations with considerable job openings and/or growth rates projected through 2029 in Figure 11.

Figure 41. Illinois Community College Workforce Equity Initiative (WEI) Model

Illinois community colleges offer a variety of associate degrees and certificate programs of varying lengths. Short-term certificates (under 30 credit hours) provide students with a quick and focused program of study that can lead to immediate employment. Examples of short-term certificates include Truck Driving, Welding Web Design, HVAC Technician, Electrician, and Firefighting. Many of the shortterm certificates allow students to enter the workforce but then are also embedded in a program of student that allows continued education toward an advanced certificate or full associate degree that allows even further expansion in career opportunities.

Earnings for completers of short-term certificates can vary widely by program. The figure below shows the top short-term programs by median earnings after three years, and the number of completers between FY2014 and FY2016. There may be other programs associated with high earnings, however data cannot be displayed for those with less than 10 completers. Certificate programs with the highest earnings include fire protection, electrical maintenance, and allied health professions.

Curriculum	No. of Completers With Earnings, FY14-16	Median Earnings After 3 Years
Fire Protection	67	\$53,647
Electrical/Electronics Maintenance and Repair Technologies/Technicians	13	\$49,524
Allied Health Diagnostic, Intervention, and Treatment Professions	12	\$41,067
Ground Transportation	12	\$38,762
Precision Metal Working	90	\$38,468
Business Administration, Management and Operations	19	\$36,657
Allied Health and Medical Assisting Services	16	\$25,669
Business Operations Support and Assistant Services	11	\$24,322
Accounting and Related Services	13	\$23,602
Human Development, Family Studies, and Related Services	15	\$19,814

Figure 42 Median	Farnings Three	Vears After	Completion	FV2014-2016	Short-Term Completers

The occupations linked to short-term certificate programs at Sauk Valley Community College are expected to have substantial job openings in the district between 2020 and 2030. Total employment for truck drivers is projected to decrease 0.6% in the district, but there are 136 projected job openings annually. Employment for general managers is projected to increase 7.4% in the district, including 93 job openings per year. These employment projections are conservative, given that completers are not strictly limited to employment opportunities in the district they studied in, and completers can pursue stackable credentials for further employment opportunities.

SOC	Description	2020 Jobs	2030 Jobs	Growth rate	Annual Openings
53-3032	Heavy Truck Drivers	1,299	1,291	-0.6%	136
11-1021	General and Operations Managers	1,088	1,168	7.4%	93
49-9071	Maintenance and Repair Workers, General	961	1,002	4.2%	90
39-9011	Childcare Workers	419	378	-9.6%	55
43-1011	First-Line Supervisors of Office and Administrative Support Workers	514	494	-3.9%	47
13-2011	Accountants and Auditors	350	380	8.5%	33
33-2011	Firefighters	349	326	-6.7%	22
51-4021	Extruding and Drawing Machine Setters, Operators, Metal and Plastic	28	37	31.6%	4
31-9099	Healthcare Support Workers	29	34	15.9%	4

Economic Impacts

Sauk Valley Community College is an important source of expenditures and employment for the region. As part of their day-to-day operations, each college purchases goods and services, many of them from the local economy. They also pay their employees, who in turn spend their wages and salaries in the local economy. Additionally, the college invest in site improvements, remodeling, and new construction that generate additional expenditures and jobs.

Any change in economic activity, such as the purchase of a commodity or a service, has direct and indirect effects. The direct effects are the employment, payroll and purchases of goods and services directly by the colleges. The indirect effects occur through a variety of channels. For example, when a community college hires a local printer to produce its catalogues and brochures, these orders contribute directly to the income of the local printing industry. The printers' employees spend at least some of their income locally, and these purchases contribute to the employment and the income of other local industries and services. The printers spend part of their income from the community college's orders on the supplies that they need to run their businesses. To the extent that these purchases are local, they contribute to the incomes of employees in other industries, who in turn spend their incomes on still other goods and services with these effects again induced by the college's initial purchase.

IMPLAN Pro economic modeling software was used to produce estimates of the indirect economic impacts of Sauk Valley Community College, based on the direct impacts. Direct impacts are simply the set of expenditures or employment applied to the predictive model for impact analysis. Indirect impacts are then derived as additional effects caused by industries purchasing from other industries. Induced impacts take into account the spending in the local economy of the new income generated by the new employment produced from the impact.

Data provided by Sauk Valley Community College to the Illinois Community College Board (including wages, salaries, and capital costs) identified \$11.7 million in operating expenditures during fiscal year 2020. Sauk Valley Community College paid over \$8.2 million in wages and benefits to their 234 employees that lived in the region. These direct impacts rippled through the economy creating additional jobs, payrolls, and other economic activity. These impacts are summarized below in Figure 44. About 270 jobs in the district could be attributed to the college operations. These operations were associated with about \$15.9 million in economic output (equivalent to total sales of a business or total spending of a government enterprise). Value added, which is a measure similar to Gross State Product, totaled over \$11.0 million.

Impact Type	Direct Effect	Indirect Effect	Total Effect
Employment	234	36	270
Output	\$11,703,226	\$4,289,189	\$15,992,414
Total Value Added	\$8,680,508	\$2,339,537	\$11,020,045
Employee Compensation	\$8,276,960	\$1,166,689	\$9,443,649

Figure 44. Sauk Valley Community Colleges' Operational Expenditures Output and Employment Impact - FY2020 Beyond the effects of direct spending and employment, Sauk Valley Community College also strengthens the regional economy by addressing employers' workforce needs. According to their mission, "Sauk Valley Community College is dedicated to teaching and scholarship while engaging the community in lifelong learning, public service, and economic development." According to their vision, Sauk Valley Community College will be a leader in student achievement while expanding access to higher education across the Sauk Valley region. In a survey of the community colleges' business engagement, in 2019, 22 employers were served by credit or noncredit programs at Sauk Valley Community College. In 2020, including the recession, 20 employers were served by the college.
